

- ray_tracer branch: almost entirely Pair Programming Ilja+Jakob, sometimes with Kamil
- basic_blocks_and_renderer_refactoring branch: almost entirely pair programming Ilja+Jakob, sometimes with Kamil
- refine-audio branch: started by Marco, continued by Ilja and Jakob to finish the audio system
- GitHub contributions line count for Kamil not accurate: inflated by large XML files
- Most merges onto main (resolving conflicts etc.) were basically done in cooperation by Kamil, Jakob, and Ilja (not always all three at once)
- entities branch (apologies for unfortunate spelling mistake lol) was mostly done by Ilja, but sometimes in Pair programming with Kamil; contains quite a bit of stuff unrelated to entities, the whole thing got a bit chaotic at times
- commenting_parser branch was used somewhat differently than intended, contains updates to maps and some other stuff now too (didn't want the bother of renaming it)

In other cases, who did what is mostly apparent from the Git history

Overall:

- Renderer done in largest part by Jakob, with contributions by Ilja in early stages (before early-to-mid-January)
- Kamil mainly responsible for all Parsers, texture creation, level creation, programming of Interactables
- Ilja involved mainly in Entity programming including their behaviours, combat/damage system, movement system (fundamental collision logic by Jakob); Ilja chiefly responsible for prototype shown in initial project presentation
- Marco responsible for serverside tests (GitHub Actions), Main Menu, fundamental audio systems; also did a switch of the library used for windowing and inputs (minifb -> pixel+winit); sadly this switch was abandoned as it turned out not as sensible as previously thought
